

**SYSTEM AND METHOD FOR TESTING AN INTERCONNECT IN A
COMPUTER SYSTEM**

Abstract

5

A computer system comprising an operating system, a first component that comprises a first test module, a second component that comprises a second test module, and an interconnect coupling the first component and the second component is provided. The first test module is configured to provide a first test
10 pattern to the second test module on the interconnect in response to a first signal from the operating system.
